PROFILE

I am a software developer with 4 years of experience building web applications that go into production and stay there. Three of those years were spent on a fintech platform where I worked across React, TypeScript and REST APIs, and where I also handled the issues real users reported, which taught me a lot about writing code that holds up outside a demo. I build things end to end, from a WordPress news site that has been live since 2019 to a management app I designed for a creperie business. I care about clean architecture, readable code and shipping something people actually use. I am based in Dubai, fluent in English and French, and available immediately.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, PHP, C#, HTML5, CSS3, SCSS, SQL

Frontend: React.js, React Hooks, React Router, Redux, Context API, Tailwind CSS, Bootstrap, responsive and mobile first design, accessibility

Backend: Node.js, REST APIs, .NET and ASP.NET, authentication and session handling, WordPress and WooCommerce

Databases: PostgreSQL, MySQL, Supabase, Firebase

Tooling: Git and GitHub, Vite, Webpack, npm, ESLint, Prettier, Jest, React Testing Library, Chrome DevTools

Deployment: Vercel, Netlify, hosting and domain management, CI/CD basics, Docker (familiar)

Ways of working: Agile and Scrum, code reviews, technical documentation, Figma to code, debugging and root cause analysis

EXPERIENCE

Full Stack Developer, eBOS

Mar 2023 to Apr 2026

Fintech, Remote

- Built and maintained web applications on a production fintech platform using **React, TypeScript and REST APIs**, working across the stack from interface to data layer.
- Designed reusable component libraries and set up state management with Redux and Context API, which cut duplicated code and sped up how quickly the team could ship new features.
- Handled authentication, session management and client side data flows across several modules of the platform.
- Took ownership of issues reported by users, reproducing them, tracing the cause through logs and API calls, then fixing and documenting them so they did not come back.

- Improved bundle size, rendering and caching with Webpack and Vite, and helped bring system downtime down by **20 percent** through steady performance work.
- Wrote unit and integration tests with Jest and React Testing Library, and reviewed teammates' code in a regular review cycle.

Front End Developer, Lahkam

Feb 2022 to Feb 2023

Douala, Cameroon, Hybrid

- Built responsive interfaces with HTML5, SCSS, JavaScript and Bootstrap, keeping the experience consistent across devices and browsers.
- Integrated third party REST APIs and added AJAX driven interactions to cut down on full page reloads.
- Worked with backend developers to agree API contracts and data structures before implementation.

Web Developer, Afrique Media

Jun 2019 to Dec 2021

Douala, Cameroon, On site

- Designed, built and deployed the company website end to end. It is **still in production today** and serves thousands of daily users (afriquemedia.tv).
- Developed custom WordPress themes and plugins in PHP and JavaScript, turning design mockups into responsive, on brand interfaces.
- Cut page load time by roughly **35 percent** through asset compression, caching and code splitting.
- Managed hosting, database configuration and backups, and centralised the team documentation, which brought reported issues down by **20 percent**.

SELECTED PROJECTS

PlatOS, creperie business management app React, TypeScript, Supabase

A management app I designed and built for a creperie business, covering day to day operations. I handled the whole cycle myself, from working out what the business actually needed to building, testing and supporting it in real use.

Afrique Media WordPress, PHP, JavaScript, SCSS

A full news and media platform built end to end on WordPress with custom themes and plugins. Live since 2019, serving thousands of readers a day, and still running in production. afriquemedia.tv

Banking interface React, JavaScript, CSS

A responsive banking dashboard interface built with a clean, reusable component architecture and careful attention to state management and accessibility.

Nail salon booking app React, JavaScript

A booking application for a nail salon, handling appointment scheduling and service selection with a simple, mobile friendly interface.

EDUCATION

Bachelor's Degree in Software Engineering

2019 to 2022

University Institute Gulf of Guinea, Douala, Cameroon

ADDITIONAL

Certification: Customer Service Certificate, First Security Group Training Center, Dubai, 2026

Languages: English (fluent), French (fluent)

Recognition: Winner, KIBISU Competition, 2018

Community: Founder, African Girls in Tech
